Subject: Districts importing SIRAS data into your SIS

Hi All,

We are planning on updating our studentData.csv file format by adding more data columns to the end of the file.

This will result in more information being available to your SIS systems that are integrated with SIRAS.

If your district uses Aeries, go to the Special Ed. Data Import page and see if your district is actively pulling studentData.csv and serviceData.csv

Most likely your district is using tableA.csv and tableB.csv and we are not planning on changing that file format at the moment.

What we don't know is who the most up to date SIS contact is for your district so we can add them to a direct mailing list for this type of information.

Can you please contact your SIS department to find out if they are processing SIRAS data files and have them email me directly so they can be notified in advance of these types of changes?

Thank you.
