

504 Integration Overview

Shared authority model

Overview:

Full bi-directional 504 data integration is available between the district SIS and Siras in a shared authority model. Contact steve@sirassystems.com for a quote.

The SIS and Siras can:

- Initiate creation of new 504 records in Siras.
- Aeries districts allow Siras to pull 504 demographic and contact data from API
- Non Aeries districts extract and upload demographic and contact files to FTP for Siras
- 504 demographic and contact data updated in Siras via API or FTP nightly
- Generate an import log in the SIS and Siras to be reviewed for any anomalies in the data
- Pull active 504 record data from Siras for SIS reporting program code 101 to CALPADS

Since the SIS needs to be the reporting authority of students in the 504 module, the above features allows staff to fully work on 504's in Siras while still allowing the SIS to be fully informed of all active 504 records in Siras. SIS staff may need to contact their SIS for technical support of the initial set up. There is an annual fee in Siras for maintenance and use of this SIS integration services. Contact support@sirassystems.com for further information.
